INT. J. CONTROL, 2000, VOL. 72, NO. 12, 1701–1708

SUBJECT INDEX (Vol. 72)

Abstraction, discrete-event, timed, of continuous-variable systems, 1147
Active impedance control of linear one-dimensional wave equations, 247
Actuators, for flight control, feedback design for robust tracking and robust stiffness using modified QFT technique, 1480
Adaptation mechanism for improving transient behaviour of robust control, 1218
Adaptive
  control of ac motor drives with inverter non-linearities, 784
  control of dc motor drives with converter non-linearities, 1006
  discrete quasi-sliding mode control, 365
  feedforward and feedback control of non-linear time-varying uncertain systems, 1127
  quasi-sliding mode control for discrete-time multivariable systems, 133
  stabilization of uncertain dynamic non-holonomic systems, 1689
Aircraft, high-performance fighter type, under Herbst-like manoeuvre, neural-fuzzy scheduling of H_∞ robust controllers, 740
Algorithm
  efficient, for finding the D-stability bound of discrete singularly perturbed systems with multiple time delays, 1
  fast, for constrained infinite horizon LQ problem, 1020
  for generalized eigenvalue problem solution of tridiagonal symmetric interval matrices, 531
  for minimum fuel control problem, 435
  for regular polynomial matrix resolvent decomposition, 1235
  for solving discrete HJI equation in L_2 gain optimization problem, 49
  for the robust constrained control of general batch processes, 1271
  minimal control synthesis type, robustness to non-linear plant wrt manipulator position control, 1288
  non-iterative, LMI-based, for robust static output-feedback stabilization, 1322
  receding horizon predictive control-type, for continuous-time non-linear systems subject to input constraints, 919
Algorithms
  for active impedance control of linear one-dimensional wave equations, 247
  for robust control of robot manipulators, survey, 1498
  for the identification of Tagaki–Sugeno models of MIMO non-linear dynamic systems, 591
Anti-windup scheme, observer-based, for non-linear systems with input constraints, 18
Asymptotic
  output tracking with two-level hierarchical system, 1116
  stabilization of driftless systems, 206
Asymptotically controllable time-varying systems, continuous-control Lyapunov functions, 1630
Autonomous intelligent vehicle, performance in automated traffic systems, 1665
Autoregressive equations, first-order realizations, 1043

Batch processes
  general, robust constrained control algorithm, 1271
  non-linear, estimation and model predictive control, using linear parameter varying models, 659
Blended
  multiple model structures, interpretation of local models, 620
  multiple model systems using linear local models, analytical framework, 605
Boundary control of Kirchhoff's non-linear string, 560
Boundedness properties of soft-constrained time-optimal control, 755

Chaos control
  using invariant manifolds, 258
  multi-model solution, 727
Chaotic systems, polynomial, global control, 911
Characterization of matched systems, 449
Chemical
  plant (HDA process), partial control, performance factorization and measurement selection, 512
  process identification, using multiple neural network models, 576
  process, non-linear, dynamic optimization of large-scale systems, 833
Circle criterion, frequency domain evaluation, Popov criterion and off-axis circle criterion in the MIMO case, 1299
Compensatability and optimal compensation under randomly varying distributed delays, 826
Compensation by dynamic output feedback for linear systems with independent amplitude and rate saturations, 1227, 1231
Composite linear systems, decentralized H_∞ controller design, 815
Continuous-control Lyapunov functions for asymptotically controllable time-varying systems, 1630
Continuous-time
  systems, finite-dimensional, Fuhrmann's shift realization for rational matrix functions, 332
  systems, generalized predictive control, 164
  Wiener systems, recursive identification, 981
Continuous-variable systems, timed discrete-event abstraction, 1147
Control
  active, impedance-type, of linear one-dimensional wave equations, 247
  adaptive feedforward and feedback type, of non-linear time-varying uncertain systems, 1127
  adaptive, non-linear, with persistent excitation for friction compensation, 457
  adaptive, of ac motor drives with inverter non-linearities, 784
  adaptive, of dc motor drives with converter non-linearities, 1006
  adaptive quasi-sliding mode type, for discrete-time multivariable systems, 133

adaptive-tracking type, limited complexity model unfalsifying, 1417
and instrumentation design integration, 799
applications of matrix interpolation, 174
constrained receding horizon predictive type, for systems with disturbances, 1027
continuous, Lyapunov functions for asymptotically controllable time-varying systems, 1630
deadbeat, robust, ripple-free, design, 564
deadbeat system with time-varying uncertainty, minimization of worst case steady-state tracking error, 141
design and local modelling, lazy learning, 643
design, of non-linear system, via fuzzy modelling and LMIs, 676
digital, multirate, for class of non-linear singularly perturbed systems, 851
discrete adaptive quasi-sliding mode type, 365
global, of polynomial chaotic systems, 911
$\mathcal{H}_\infty$-type, finite, dimensional, of linear parabolic systems with unbounded output operators, 1466
H_∞ discrete-time type, delta operator approach, 315
H_∞-type, non-linear, validity domain estimate, 1097
H^∞-type, of large-scale jump linear systems via averaging and aggregation, 866
law, static state feedback type, condensed structural existence conditions, disturbance rejection and decoupling problems with stability, 1392
minimax type, robust maximum principle, 305
model predictive type, and estimation, of non-linear batch processes using linear parameter varying models, 659
model reference robust type, for non-minimum phase systems with disturbances, 123
multivariable, discrete-time, variable structure robustness, 1106
of chaos, multi-model solution, 727
of fuel minimization, algorithm, 435
of general batch processes, robust constrained control algorithm, 1271
of interconnected power systems, application of stochastic inclusion principle to decentralized automatic generation control, 276
output-feedback linear quadratic type, for stabilizing pure input-delayed systems, 385
partial, performance factorization and measurement selection, applied to chemical plant, 512
predictive, based on neural network models with I/O feedback linearization, 1538
predictive, generalized, for continuous-time systems, 164
predictive, non-linear model-based, 919
redesign and iterative identification via unfalsified sets of models, basic scheme, 887
robust, design, for class of uncertain non-linear systems featuring second order sliding mode, 321
robust, global, $\mathcal{L}_2$-gain type, of structural non-linear systems, 1033
robust, of boundary, for linear time-varying infinite-dimensional systems, 392
robust, of class of sampled-data systems with LTI uncertainties, 1381
robust, of delay system with discontinuous non-linearity in the feedback, 1354
robust, of internal combustion engines, and NARMAX modelling, 289
robust, of operating regime transitions in time-delay systems, 150
robust, of robot manipulators, survey, 1498
robust, sliding-mode type, applied to two-degree-of-freedom robotic manipulator, 1087
robust, with adaptation mechanism for improving transient behaviour, 1218
soft-constrained, time-optimal, boundedness properties, 755
static sliding-mode type, robustness, for non-linear systems, 1434
systems, linear, trajectory planning in the infinity norm, 1139
time-optimal, and high-gain linear state feedback, 764
Controllability of linear time-varying system, rank condition, 929
Controller
H_∞, decentralized, design for composite linear systems, 815
multi-objective design using multiple models, minimax approach, 716
network routing, decentralized, design using overlapping decompositions, 1175
reduction with closed loop H_∞ performance constraints, QFT perspective, 1249
robust, synthesis via non-linear matrix inequalities, 971
semiglobally stable, adaptive, field-oriented, for current-fed induction motors, 996
simple, linear, stabilizing, for RLED robot with uncertain parameters and some related applications, 546
structures, finite-precision, for sampled-data systems, stability issues, 1331
Controllers
continuous adaptive robust type, guaranteeing uniform ultimate boundedness for uncertain non-linear systems, 115
fixed-order, characterization based on LMI, 58
for SISO systems, robust, direct, adaptive, time and frequency domain design conditions, 517
H_∞-type, robust, neural-fuzzy scheduling for high performance fighter aircraft under a Herbst-like manoeuvre, 740
robust, for linear systems, l^p parameter perturbation and design, 267
Controlling
chaos using invariant manifolds, 258
hyperchaos of the Rössler system, 882
Converter non-linearity for dc motor drives, adaptive control, 1006

Deadbeat control system with time-varying uncertainty, minimization of worst case steady state tracking error, 141
Decentralized
H_∞ controller design for composite systems, linear case, 815
routing controller design using overlapping decompositions, 1175
Decomposition, exact, slow–fast, of a class of non-linear singularly perturbed optimal control problems via invariant manifolds, 1609
Decoupling problems and disturbance rejection with stability, condensed structural solutions, 1392
Delay system with discontinuous non-linearity in the feedback, robust control and tracking, 1354
Delay systems
Laguerre and Kautz shift approximations, 932
linear, Lyapunov–Krasovskii functionals for stability analysis, 374
linear, with simultaneous delays in state, actuation and measurement, stabilization, 1619
optimal weighted L_2 model reduction, 39

Delays, distributed, randomly varying, between sensor–controller–actuator, compensatability and optimal compensation, 826
Delta operator approach to discrete-time H_∞ control, 315
Descriptor system eigenstructure assignment via output feedback, new complete parametric approach, 345
Descriptor systems, robust pole assignment, via proportional plus partial derivative state feedback, 1193
Design
feedback type, of flight control actuators, for robust tracking and robust stiffness using modified QFT technique, 1480
integration of instrumentation and control, 799
multi-objective, of controller, using multiple models, minimax approach, 716
network routing controller, decentralized, using overlapping decompositions, 1175
norm based, of fault detectors, 773
of decentralized H_∞ controller for composite linear systems, 815
of filter, robust, with time-varying parameter uncertainty and error variance constraints, 30
of output feedback LQ optimal systems, using data-based synthesis, 1054
of robust control for class of uncertain non-linear systems featuring second-order sliding mode, 321
of robust controllers for linear systems, and l^p parameter perturbation, 267
of robust direct adaptive controllers for SISO systems, time and frequency domain design conditions, 517
of robust ripple-free deadbeat control, 564
trade-offs, frequency domain type, for linear periodic feedback systems, 1310
Differentiation, numerical, high-gain observers, discrete-time implementation, 1523
Digital multirate control for a class of non-linear singularly perturbed systems, 851
Directionality compensation, optimal, in processes with input saturation non-linearities, 1555
Discontinuous feedback non-linearity delay system, robust control and tracking, 1354
Discrete
adaptive quasi-sliding mode control, 365
HJI equation solution algorithm in L_2 gain optimization problem, 49
linear repetitive processes, new 2D models and transition matrix, 1365
singularly perturbed systems with multiple time delays, efficient algorithm for D-stability, 1
systems, 2-D, LMI approach to output feedback stabilization, 97
Discrete-time
H_∞ control, delta operator approach, 315
implementation of high-gain observers for numerical differentiation, 1523
multivariable systems, adaptive quasi-sliding mode control, 133
multivariable variable structure control robustness, 1106
singular observers, $\mathcal{H}_2\mathcal{H}_\infty$ optimality and unknown inputs, 481
system with structured uncertainties, quadratic stability, 1427
Discretized Lyapunov functional for uncertain systems with multiple time-delay, 1436
Disturbance rejection and decoupling problems with stability, condensed structural solutions, 1392
Disturbed and input constrained systems, receding horizon predictive control, 1027
Driftless systems, asymptotic stabilization, 206
D-stability bound of singularly perturbed systems with multiple time delays, efficient algorithm, 1
Dynamic
optimization of large-scale systems, applied to non-linear chemical process, 833
output feedback compensation for linear systems with independent amplitude and rate saturations, 1227

Eigenstructure assignment in descriptor systems via output feedback, new complete parametric approach, 345
Eigenvalue and stability robustness in pole assignment and computation, 1165
Eigenvalue problem, generalized, for tridiagonal symmetric interval matrices, 531
Engines, internal combusion type, NARMAX modelling and robust control, 289
Estimation
and model predictive control of non-linear batch processes using linear parameter varying models, 659
in H_∞, using linear-in-the-data algorithms, 1402
of multiple order models in the δ-domain, 629
Excitation, persistent, used with adaptive non-linear control with friction compensation, 457
Exponential stabilization of non-linear non-autonomous systems, 430

Fault detectors, norm based design, 773
Feedback
design for robust tracking and robust stiffness in flight control actuators using modified QFT technique, 1480
of output, stabilization of 2-D discrete systems, LMI approach, 97
output-type, dynamic, compensation, for linear systems with independent amplitude and rate saturations, 1227, 1231
systems, linear, multivariable,with single input and two outputs, properties, 1446
theory, quantitative, characterizing sensitivity-based and traditional formulations, 536
Filter, robust, design with time-varying parameter uncertainty and error variance constraints, 30
Finite-dimensional $\mathcal{H}_\infty$ control of linear parabolic systems with unbounded output operators, 1466
Flight control actuators, feedback design for robust tracking and robust stiffness using modified QFT technique, 1480
Frequency
domain design trade-offs for linear periodic feedback systems, 1310
domain evaluation of circle criterion, Popov criterion and off axis circle criterion in the MIMO case, 1299
Friction compensation using adaptive non-linear control with persistent excitation, 457
F-stability radius, real, unstructured, of system matrix, easily computable estimate, 493
Fuel minimization control problem algorithm, 435
Fuhrmann's shift realization for finite dimensional continuous time systems, 332
Fuzzy
modelling and LMI design of non-linear system control, 676
tuning and sliding mode control for enhanced robustness of non-linear systems, applied to two-degree-of-freedom robotic manipulator, 1087

Gain and phase margin of optimal memoryless regulator of systems with time-delay, 404
Gain-scheduling, velocity-based, for input–output linearization, 229
Global
  control of polynomial chaotic systems, 911
  stabilizability for class of uncertain systems with multiple time-varying delays via linear control, 904

H_2 optimization problems with H_2 and H_∞ constraints, approximate solutions, 1260
$\mathcal{H}_2\mathcal{H}_\infty$ optimality, discrete-time singular observers, 481
H^∞ control of large-scale jump linear systems via averaging and aggregation, 866
H_∞
  discrete-time control, delta operator approach, 315
  estimation using linear-in-the-data algorithms, 1402
Hierarchical system, two-level, asymptotic output-tracking, 1116
Hyperchaos control in Rössler system, 882

Identification
  iterative, and control redesign via unfalsified sets of models, basic scheme, 887
  of chemical process with multiple neural network models, 576
  of non-linear systems, qualitative validation and generalization, 1592
  recursive, of continuous-time Wiener systems, 981
  state-space type, of stable systems, 193
Impedance control, active, of linear one-dimensional wave equations, 247
Impulsive behaviour of polynomial matrix descriptions of free linear multivariable systems, 215
Inclusion principle, stochastic, applied to decentralized automatic generation control, 276
Input saturation non-linearity constrained processes, optimal directionality compensation, 1555
Input-delayed systems, pure, stabilization using output-feedback linear quadratic control, 385
Input–output linearization by velocity-based gain-scheduling, 229
Instrumentation and control design integration, 799
Intelligent autonomous vehicle, performance in automated traffic systems, 1665
Inverter non-linearity for ac motor drives, adaptive control, 784
Iterative identification and control redesign via unfalsified sets of models, basic scheme, 887

Jump linear systems, large-scale, H^∞ control via averaging and aggregation, 866

Kautz and Laguerre shift approximations of delay systems, 932
Kirchhoff's non-linear string, boundary control, 560

L_2 gain optimization problem, discrete HJI equation solution algorithm, 49
L_2-optimal model reduction method for stable delay systems, 39
Laguerre and Kautz shift approximations of delay systems, 932
Large-scale jump linear systems, H^∞ control via averaging and aggregation, 866
Large-scale systems, dynamic optimization, applied to non-linear chemical process, 833
Learning, lazy, for local modelling and control design, 643
Linear
  control systems, trajectory planning in the infinity norm, 1139
  discrete repetitive processes, new 2D models and transition matrix, 1365
  estimation aspects in H_∞, 1402
  functional state observer for time-delay systems, 1642
  local models for blended multiple model systems, analytical framework, 605
  multivariable feedback systems with a single input and two outputs, properties, 1446
  multivariable time-invariant systems, sensitivity of system norms, 84
  periodically time-varying systems, frequency domain design trade-offs, 1310
  system robust controllers design and l^p parameter perturbation, 267
  systems in state-space representation, discrete adaptive quasi-sliding mode control, 365
  systems with independent amplitude and rate saturations, dynamic output feedback compensation, 1227, 1231
  systems with multilinearly parametric uncertainties, plotting robust root loci, 501
  systems with simultaneous state, actuation and measurement delays, stabilization, 1619
  time-varying infinite-dimensional systems, robust boundary control, 392
  time-varying system controllability, rank condition, 929
Linearization, input–output type, by velocity-based gain-scheduling, 229
Linear-matrix-inequality-based algorithm, non-iterative, for robust static-output-feedback stabilization, 1322
LMI
  approach to output feedback stabilization of 2-D discrete systems, 97
  characterization of fixed-order controllers, 58
LMIs and fuzzy modelling used for non-linear control system design, 676
Local
  modelling and control design, lazy learning, 643
  models, interpretation, in blended multiple model structures, 620
  models, linear, for blended multiple model systems, analytical framework, 605
l^p parameter perturbation and design of robust controllers for linear systems, 267
LQ
  optimal systems, output feedback realization, general design using data-based synthesis, 1054
  problem, constrained infinite horizon type, fast algorithm, 1020
Lyapunov
  functional, discretized, for uncertain systems with multiple time-delays, 1436
  functions, continuous-control-type, for asymptotically controllable time-varying systems, 1630
  functions, piecewise-linear, parametrization via linear programming, 702

global stability of time-varying hybrid linear systems, sufficient conditions, 107
Lyapunov–Krasovskii functionals for stability analysis of linear delay systems, 374

Macrovariable analytic non-linear control method for chaotic system stabilization, 258
Manipulator position control, robustness of minimal control synthesis algorithm to non-linear plant, 1288
Markovian jumping parameters in uncertain linear systems, robust stabilization, 842
Matched systems characterization, 449
Matrices, interval-type, symmetric, tridiagonal, generalized eigenvalue problem, 531
Matrix
descriptions, polynomial type, of free linear multivariable systems, solution and impulsive behaviour, 215
functions, rational, Fuhrmann's shift realization for finite dimensional continuous time systems, 332
inequalities, non-linear, in robust controller synthesis, 971
interpolation, some control applications, 174
polynomial type, regular, resolvent decomposition, computation algorithm, 1235
real unstructured F-stability radius, easily computable estimate, 493
Maximum principle, robust, in minimax control, 305
MIMO versions of circle, Popov and off-axis circle criteria, frequency domain evaluation, 1299
Minimax approach for multi-objective controller design using multiple models, 716
Model
predictive control and estimation of non-linear batch processes using linear parameter varying models, 659
reduction, optimal weighted L_2-type, of delay systems, 39
reference robust control for non-minimum phase systems with disturbances, 123
sets, unfalsified, for control redesign and iterative identification, 887
Model-based predictive control of non-linear continuous-time systems, 919
Modelling
assumptions used for robust control of robot manipulators, survey, 1498
local, and control design, lazy learning, 643
NARMAX-type, and robust control, of internal combustion engines, 289
Models
2D, new, transition matrix for discrete linear repetitive processes, 1365
multiple-order, estimation in the δ-domain, 629
of MIMO non-linear dynamic systems, identification algorithm, 591
Model-unfalsifying limited-complexity adaptive tracking control, 1417
Motor drives
ac, with inverter non-linearities, adaptive control, 784
dc, with converter non-linearities, adaptive control, 1006
Motors, current-fed induction-type, semiglobally stable adaptive field controller, 996
Multimodel
approach to chemical process identification using multiple neural network models, 576
solution for the control of chaos, 727
systems, discrete, uncertain, non-linear, constrained quadratic stabilization using piecewise affine state-feedback, 686
Multiple
model systems, blended, interpretation of local models, 620
model systems, blended, using linear local models, analytical framework, 605
order models estimation in the δ-domain, 629
time delay discrete singularly perturbed systems, efficient algorithm for D-stability bounds, 1
Multirate digital control for class of non-linear singularly perturbed systems, 851
Multivariable
discrete-time systems, adaptive quasi-sliding mode control, 133
discrete-time variable structure control robustness, 1106
free linear systems, polynomial matrix descriptions, solution and impulsive behaviour, 215

NARMAX modelling and robust control of internal combustion engines, 289
Network routing controller design, decentralized, using overlapping decompositions, 1175
Neural network
models, multimodel approach to chemical process identification, 576
models with I/O feedback linearization for predictive control, 1538
Neural-fuzzy scheduling of H_∞ robust controllers for a high performance fighter aircraft under a Herbst-like maneouvre, 740
Non-autonomous non-linear systems, exponential stabilization, 430
Non-holonomic uncertain dynamic systems, adaptive stabilization, 1689
Non-linear
control system via fuzzy modelling and LMIs, 676
dynamic system identification, multimodel approach, 591
H_∞ control validity domain estimate, 1097
model-based predictive control, 919
non-autonomous systems, exponential stabilization, 430
optimal control approach to central sewer network flow control, 418
plant, robustness of minimal control synthesis algorithm wrt manipulator position control, 1288
singularly perturbed optimal control problems class, exact slow–fast decomposition via invariant manifolds, 1609
string (Kirchhoff's), boundary control, 560
structural systems, robust global $\mathcal{L}_2$-gain control, 1033
system identification, qualitative validation and generalization, 1592
systems, polynomic, pendulum tracking control using numerically efficient state estimation approach, 1565
systems, static sliding mode control robustness, 1434
systems with input constraints, observer-based anti-windup scheme, 18
systems with mismatched uncertainties, robust output tracking, 411
upper-triangular systems with marginally unstable free dynamics synthesis, using state-dependent saturation, 1078
Non-minimum phase systems with disturbances, model reference robust control, 123
Numerical differentiation, high-gain observers, discrete-time implementation, 1523

Observer, of state, linear functional type, for time-delay systems, 1642
Observer-based anti-windup scheme for non-linear systems with input constraints, 18
Observers
  discrete-time, singular, $\mathcal{H}_2\mathcal{H}_\infty$ optimality and unknown inputs, 481
  high-gain, for numerical differentiation, discrete-time implementation, 1523
  non-linear, optimization-based, 1204
Optimal directionality compensation in processes with input saturation non-linearities, 1555
Optimization
  based non-linear observers revisited, 1204
  dynamic, of large-scale systems, applied to non-linear chemical process, 833
  of parabolic systems with deviating arguments, 947
  problems, H_2-type, with H_2 and H_∞ constraints, approximate solutions, 1260

Parabolic systems
  linear, with unbounded output operators, finite-dimensional $\mathcal{H}_\infty$ control, 1466
  with deviating arguments, optimization, 947
Parametric approach to eigenstructure assignment in descriptor systems via output feedback, 345
Parametrization of piecewise linear Lyapunov functions via linear programming, 702
Partially controlled systems, performance factorization and measurement selection, 512
Pendulum tracking control using numerically efficient state estimation approach for polynomic non-linear systems, 1565
Performance factorization and measurement selection for partially controlled systems, 512
Perturbation bounds, non-local, non-linear, sensitivity of system norms, 84
Perturbed systems (singularly)
  non-linear, digital multirate control, 851
  sliding surface design, 990
Phase and gain margin of optimal memoryless regulator of systems with time-delay, 404
PI feedback controllers, used to study pole placement problem, 1065
Piecewise linear Lyapunov functions, parametrization via linear programming, 702
Pole assignment
  robust, in descriptor systems, via proportional plus partial derivative state feedback, 1193
  with eigenvalue and stability robustness, 1165
Pole placement problem via PI feedback controllers, 1065
Polynomial
  chaotic systems, global control, 911
  matrix, regular, resolvent decomposition, computation algorithm, 1235
Power systems, interconnected, decentralized automatic generation control, application of stochastic inclusion principle, 276
Predictive control
  based on neural network models with I/O feedback linearization, 1538
  generalized, for continuous-time systems,164
  non-linear model based, 919

Quadratic
  stability of discrete-time system with structured uncertainties, 1427
  stabilization, constrained, of discrete-time uncertain non-linear multi-model systems using piecewise affine state-feedback, 686
Qualitative validation and generalization in non-linear system identification, 1592

Rank condition for the controllability of linear time-varying system, 929
Realizations, first-order, of autoregressive equations, 1043
Receding horizon constrained predictive control for systems with disturbances, 1027
Recursive identification of continuous-time Wiener systems, 981
Regulator, memoryless, optimal, of systems with time-delay, gain and phase margin, 404
Repetitive discrete linear processes, new 2D models and transition matrix, 1365
Robot
  manipulators, robust control, survey, 1498
  RLED type, with uncertain parameters, simple linear stabilizing controller, related applications, 546
Robust
  boundary control for linear time-varying infinite-dimensional systems, 392
  control and tracking of delay system with discontinuous non-linearity in the feedback, 1354
  control design for class of uncertain non-linear systems featuring second-order sliding mode, 321
  control of class of sampled-data systems with LTI uncertainties, 1381
  control of robot manipulators, survey, 1498
  control with adaptation mechanism for improving transient behaviour, 1218
  controller synthesis via non-linear matrix inequalities, 971
  filter design with time-varying parameter uncertainty and error variance constraints, 30
  global $\mathcal{L}_2$-gain control of non-linear structural systems, 1033
  maximum principle in minimax control, 305
  output tracking of non-linear systems with mismatched uncertainties, 411
  pole assignment in descriptor systems via proportional plus partial derivative state feedback, 1193
  ripple-free deadbeat control design, 564
  sliding mode control with application to two-degree-of-freedom robotic manipulator, 1087
  stabilization for generalized state-space systems with uncertainty, 1659
Robustness
  of multivariable discrete-time variable structure control, 1106
  of static sliding mode control for non-linear systems, 1343
Root loci, robust, plotting for linear systems with multilinearly parametric uncertainties, 501
Rössler system, controlling hyperchaos, 882

Sampled-data
  system class with LTI uncertainties, robust control, 1381
  systems, finite-precision controller structures, stability issues, 1331

Saturation, state-dependent, used to synthesize upper-triangular non-linear systems with marginally unstable free dynamics, 1078
Sensitivity-based and traditional formulations of quantitative feedback theory, characterization, 536
Sensor–controller–actuator randomly varying distributed delays, compensatability and optimal compensation, 826
Sewer network flow, central control, non-linear optimal control approach, 418
Single-input, two-output feedback systems, properties, 1446
Singular discrete-time observers, $\mathcal{H}_2\mathcal{H}_\infty$ optimality and unknown inputs, 481
Singularly perturbed
  non-linear systems, optimal control problem class, exact slow–fast decomposition via invariant manifolds, 1609
  systems, sliding surface design, 990
SISO systems, robust direct adaptive controllers, time and frequency domain design conditions, 517
Sliding
  mode, second-order, of uncertain non-linear systems, robust control, design, 321
  surface design for singularly perturbed systems, 990
  surfaces, moving, for high-order variable structure systems, 960
Sliding-mode control, static, robustness, for non-linear systems, 1434
Soft-constrained time-optimal control, boundedness properties, 755
Stability
  analysis of linear delay systems, using Lyapunov–Krasovskii functionals, 374
  global Lyapunov type, sufficient conditions, of time-varying hybrid linear systems, 107
  issues of finite-precision controller structures for sampled-data systems, 1331
  quadratic, of discrete-time system with structured uncertainties, 1427
Stabilizability, global, for class of uncertain systems with multiple time-varying delays via linear control, 904
Stabilization
  adaptive, of uncertain dynamic non-holonomic systems, 1689
  asymptotic, of driftless systems, 206
  exponential, of non-linear non-autonomous systems, 430
  of linear systems with simultaneous state, actuation and measurement delays, 1619
  of uncertain linear systems with jump parameters, 842
  quadratic, constrained, of discrete uncertain non-linear multimodel systems using piecewise affine state-feedback, 686
  robust, for generalized state-space systems with uncertainty, 1659
  robust, static-output-feedback type, non-iterative LMI-based algorithm, 1322
Stabilizing output-feedback linear quadratic control for pure input-delayed systems, 385
Stable (semiglobally) adaptive field-oriented controller for current-fed induction motors, 996
Stable systems, state-space identification, 193
State-space
  identification of stable systems, 193
  systems, generalized, with uncertainty, robust stabilization, 1659
Stochastic inclusion principle applied to decentralized automatic generation control, 276
Structural non-linear systems, robust global $\mathcal{L}_2$-gain control, 1033
System matrix, easily computable estimate for real unstructured
  F-stability radius, 493

Tagaki–Sugeno models of MIMO non-linear dynamic systems, identification algorithms, 591
Time-delay systems
  gain and phase margin of optimal memoryless regulator, 404
  linear functional state observer, 1642
  robust transition control structure, 150
  uncertain, with multiple time-delays, Lyapunov functional, 1436
Time-optimal control
  and high-gain linear state feedback, 764
  soft-constrained, boundedness properties, 755
Time-varying
  delays, multiple, in uncertain systems, global stabilization via linear controls, 904
  hybrid linear systems, Lyapunov global stability, sufficient conditions, 107
  linear infinite-dimensional systems, robust boundary control, 392
  linear system, linear, controllability, rank condition, 929
  systems, asymptotically controllable, continuous-control Lyapunov functions, 1630
Tracking
  asymptotic, of output, with two-level hierarchical system, 1116
  control of pendulum using numerically efficient state estimation approach for polynomic non-linear systems, 1565
  error minimization in worst case steady-state, deadbeat control system with time-varying uncertainty, 141
  of delay system with discontinuous non-linearity in the feedback, 1354
  of output, robust, non-linear systems with mismatched uncertainties, 411
Traffic systems, automated, performance of autonomous intelligent vehicle, 1665
Trajectory planning in the infinity norm for linear control systems, 1139
Transient behaviour improvement of robust control using adaptation mechanism, 1218.
Transition control, robust, structure for time-delay systems, 150
Transition matrix and new 2D models for discrete linear repetitive processes, 1365

Uncertain
  discrete-time system, quadratic stability, 1427
  dynamic non-holonomic systems, adaptive stabilization, 1689
  generalized state-space systems, robust stabilization, 1659
  linear systems with jump parameters, stabilization, 842
  (LTI-type) system, sampled-data type, robust control, 1381
  non-linear systems, continuous adaptive robust controllers guaranteeing uniform ultimate boundedness, 115
  non-linear systems featuring second-order sliding mode, robust control design, 321
  parameters of RLED robot, simple linear stabilizing controller, related applications, 546
  systems, robust maximum principle in minimax control, 305

systems with multiple time-delays, discretized Lyapunov functional, 1436
systems with multiple time-varying delays, global stabilization via linear control, 904
time-varying non-linear systems, adaptive feedforward and feedback control, 1127
Uncertainties, multilinearly parametric, of linear system, plotting robust root loci, 501
Unknown inputs, discrete-time singular observers, 481
Upper-triangular non-linear systems with marginally unstable free dynamics synthesis using state-dependent saturation, 1078
Variable-structure systems, high-order, moving sliding surfaces, 960
Vehicle following, automatic, with integrated throttle and brake control, 75
Vehicle, intelligent, autonomous, performance in automated traffic systems, 1665
Wave equations, linear, one-dimensional, active impedance control, 247
Wiener systems, continuous-time, recursive identification, 981
